

Leisure Program Library for New TI Calculators

Owners of the Texas Instruments Programmable 58 and 59 calculators (see December 1977 BYTE, page 204) can now enjoy recreational applications of their pocket sized computers with the Solid State Software Leisure Library module. This plug in read only memory unit contains 20 different keystroke programs for golf handicaps, bowling scores, chess ratings, results of deals in duplicate or triplicate bridge, blackjack, acey deucey, craps, NIM, biorhythms, a spacecraft landing and a sea battle game, and other applications. Two programs use the alphabetic and plotting capabilities of the PC-100A printing cradle. The module is \$35 from Texas Instruments Inc, Inquiry Answering Service, POB 53 (attn: Leisure Library), Lubbock TX 79408. ■
